## **TVILIGHT introduces a state-of-the-art asset management suite**

*New software revolutionizes the way cities manage assets and infrastructure*

**Amsterdam, the Netherlands** - TVILIGHT, a market leader in smart city lighting solutions, today announced the addition of a new comprehensive asset management suite to its CityManager platform, aiming to help cities optimize management and maintenance of public assets such as streetlights, and streamline asset-related operational activities.

Public lighting infrastructure is one of the most valuable assets in a city, vital to ensuring citizen safety and a good quality of life. However, as public lighting grows in complexity, it becomes increasingly challenging to monitor, operate, and maintain this asset. To ensure that streetlights remain a functional, state-of-the-art infrastructure, cities need a more holistic, strategic approach to maintenance.

“We are proud to introduce the CityManager asset management software suite to help local authorities, asset managers, and public lighting operators manage streetlights and other infrastructure assets more efficiently. The suite is supported by Yotta, a company with decades of experience in developing asset management solutions and a unique expertise in this field. What they offer is a comprehensive solution with amazing user-friendliness. We are excited to partner with Yotta to bring all these benefits to our customers,” explains Chintan Shah, CEO of Tvilight.

### **Engaging map-based interface to visualize assets**

CityManager helps convert a traditional Excel-type database into a powerful visual dashboard, where all important lighting asset elements (e.g. cable networks, luminaires, drivers, etc.) are tracked and presented in an interactive way that helps infrastructure operators quickly gain insight into their asset base and related processes.

### **Streamlined operational and maintenance activities**

All asset-related operational processes become simple, transparent and efficient. Starting with the logging of faults, the software tracks and oversees the repairs, and documents the maintenance work in a near real-time. The software optimizes inspections and budget planning and, thanks to integrated workflows, allows different departments and organizations to work together more efficiently.

**Single platform for all public assets**

While excellent for operating both conventional and new connected streetlights, CityManager offers optional modules that allow managing other public assets, such as highways, roadways, street works, waste management, and green spaces. Thanks to open standards and open APIs, all information is accessible to third-party smart city dashboards.

**Enterprise strength, user-specific**

Designed as an enterprise solution, Tvilight's new asset management software allows connecting an unlimited number of systems, devices, and data sources. The cloud-based model facilitates a simpler data access and makes support and upgrade processes easier.

CityManager asset management suite is powered by Alloy. Yotta's next generation asset management solution is a proven platform designed specifically for maintaining infrastructure. Yotta's software is used worldwide by local authorities and councils, including the Dutch road authorities, and by organizations such as Highways England. The street lighting management module is successfully used to maintain over a million streetlights in over 75 cities worldwide. "We're very excited to be working in partnership with Tvilight, to bring Alloy's new era technology to organizations across the globe. Tvilight's focus on customer experience excellence matches our own and this partnership is a perfect platform to demonstrate the power of the future of asset management," adds Nick Smee, Yotta CEO.

### **About TVILIGHT ([www.tvilight.com](http://www.tvilight.com))**

Tvilight is a European market leader specialized in sensors, wireless lighting controllers, and connected light management solutions for outdoor applications. Our products create an independent open network that allows integrating a multitude of third-party applications and thus constitute a reliable, future-proof base for Smart Cities and the Internet of Things. The company has an installed base of more than 250 projects globally and has deployed thousands of intelligent connected devices in iconic cities and critical infrastructure around the world. Tvilight's international projects include Amsterdam Airport Schiphol, Dutch Railways, Port of Moerdijk, Seoul, Beijing, as well as some of the biggest German cities such as Düren, Münster, Cologne, Dortmund, and Berlin.

### **About YOTTA ([www.yotta.co.uk](http://www.yotta.co.uk))**

Yotta is a leading, global connected asset management software and services provider. It empowers organizations to make better, more informed decisions by ensuring its customers' systems, assets and people are connected, and the data they produce is structured and captured to provide operational, as well as strategic insight.

Innovation is at the heart of everything Yotta does and data drives the company forward.

Yotta understands its customers' needs and provides them with revolutionary connected asset management solutions, utilizing its industry-leading software and consultancy services.

The company's cloud-based asset management platform, Alloy, equips clients with data visualization, powerful workflow management tools, enterprise-strength and user-specific capabilities. Connected assets lay the foundation for the future of smart cities and Yotta's software and services represent a 'new era' of connected asset management.
